. code for it's. 72k Jun 29, 2017 "He's
a good person and we admire what he does,
and he's bright. It's a terrible thing for any
player to be in that situation. ... [Paul] was a
real nice person, and our group of guys are
probably going to miss him a lot." I'm not a

big Braves fan, but this is a pretty classy gesture, especially since it's obvious how complicated it is to make the best decisions in life. For a second there, I was remembering Walter "Smokey" Coleman.

Q: Prove that this transformation is continuous

I'm studying the theory of topological spaces from K. Kuratowski book and I'm stuck at the following question: Consider the transformation $T: X \rightarrow X$ such that for any $(a, b) \in X$ we have $T(a, b) = (\alpha, \beta)$, where $\alpha \in [0, 1]$ is the first component, the number that corresponds to the intersection with the first axis, $\beta \in [0, 1]$ the second component is the number that corresponds to the intersection with the second axis, and the point is $(a, b) \in X$.

Prove that T is continuous. The question is in Kuratowski's Book. My work up to now is Let's denote $\alpha = a_1$. Then we have $a = a_1$, $b = a_2$. Denote $T^{-1}([a_1, 1]) = [a_2, b]$. Then we have $T^{-1}([a_1, 1] \cap [0, a_1]) = [a_2, b] \cap [0, b]$. If we denote $T^{-1}([a_1, 1] \cap [0, a_1]) = [a_$

$2, b] \cap [0, b] = [a_2, a_1] \cap [0, 1]$, then $T^{-1}([a_1, 1]) = \alpha = a_1$ and $T^{-1}([0, a_1]) = \beta = a_2$. Then
